How Senator John Walsh Plagiarized a Final Paper

Senator John Walsh of Montana took most of a 2007 final paper required for his master's degree from the United States Army War College from other sources without proper attribution. Mr. Walsh [copies an entire page](#) nearly word-for-word from a Harvard paper, and [each of his six conclusions is copied](#) from a document from the Carnegie Endowment for International Peace without attribution. JULY 23, 2014 | [RELATED ARTICLE](#)

Story by JONATHAN MARTIN. Graphic by JOSH KELLER, MATTHEW ERICSON, and NICK CORASANITI.

Passages taken **without attribution** Passages with **improper attribution**, including using other authors' language without quotations.

THE CASE FOR DEMOCRACY AS A LONG TERM NATIONAL STRATEGY

Identical Beginnings

The first sentence of Mr. Walsh's thesis is almost identical to that of a 2003 Foreign Affairs article by Thomas Carothers, "Promoting Democracy And Fighting Terror." Throughout the paper Mr. Walsh cites the work of other authors in footnotes, but uses their exact – or almost exact – language without quotation marks.

When George W. Bush took office in January 2001, few expected that promoting democracy around the world would become a major issue in his presidency.¹ During 2001, the Bush administration did not even address the issue of promoting civil societies, rule of law, free elections and open political processes as major issues of their agenda.² During the 2000 presidential campaign Bush and his advisors made it clear that they favored great-power realism over idealistic notions such as nation building or democracy promotion.³ Four years later President Bush used his second inaugural speech to define an expansive new mission for American foreign policy based on promoting freedom around the world, it was clear that the president's interests in democracy was more than a passing fancy.⁴

The policies championed on January 20, 2005, have become known as the Bush Doctrine. However, the idea that the advance of democracy beyond one's shores is vital to the

THE SEARCH FOR PSYCHOLOGY'S LOST BOY

In 2009 the decades-old mystery of 'Little Albert' was finally solved. Or was it?

By Tom Bartlett

June 2, 2014

First comes fire, followed by the monkey.

The baby on the floor next to the unsmiling woman. The burning newspaper just beyond the baby's grasp. The tiny monkey on a leash, led by the man in the tie. The parade continues: scraggly dog, rat, rabbit. Through it all, the baby, plump and serene, gazes on with mild interest. No tears, no tantrums.

These words appear on the screen:

"Fear of an animal may be experimentally set up by stimulating the infant with a loud sound just at the moment the animal is presented. Six combined stimulations produced the marked fear of the rat shown next."

In the following scene, the rat returns. The baby cries, attempts to crawl away. The rabbit and the monkey also return, along with a different dog, and the baby cries each time—even without the loud noise. The once-placid infant is now a wailing wreck.

■ The grainy, black-and-white footage, filmed in 1919 and 1920, documents what has become a classic psychology experiment, described again and again in articles and books. The idea is that the baby was conditioned to be afraid, instilled with a phobia of all things furry.

Go to 7:12 for the sequence that includes Little Albert

The man in the tie is John Watson, the father of behaviorism, a foundational figure in psychology, a Johns Hopkins University researcher who rose from poverty to prominence only to watch his academic career cut short by scandal. When he's remembered now, it's often in connection with this experiment, his legacy forever entwined with the baby nicknamed Little Albert.

The real identity of that baby has long intrigued students of psychology. Who was he? What happened to him? Did Watson really saddle the poor kid with a lifelong terror of animals?

Those questions were long thought to be unanswerable. Watson provided relatively scant biographical detail in his notes on the experiment, and he burned his papers before his death, leaving the curious without much to go on. Then, in 2009, Hall Beck, a professor of psychology at Appalachian State University, published a paper that shed new light on the case. Beck and his fellow researchers had tracked down leads and sifted through clues for a decade before finally arriving at a conclusion.

What they found cast an even darker shadow over Watson's flawed, ethically dubious experiment. The history of psychology would need to be rewritten—and, indeed, the discovery has already made its way into a number of textbooks. No one would be able to look at the film, or think about Little Albert, in quite the same way again.

That is, unless Beck got it wrong.

Hall Beck's office is something of a shrine. On top of a filing cabinet is a framed photo of the baby his research identified as Little Albert. On the wall is a promotional poster from one of his talks about Little Albert. On a shelf is a photo of John Watson, taken in his later years, looking sharp and determined. "To My Biggest Fan" reads the dedication, a gag from a student familiar with Beck's obsession.

John Watson conducted the Little Albert experiment at the Johns Hopkins U's Peirce Psychology Clinic.

- NET PRICE

AVERAGE NET PRICE FOR FULL-TIME BEGINNING STUDENTS

Full-time beginning undergraduate students who were awarded grant or scholarship aid from federal, state or local governments, or the institution.

	2010-2011	2011-2012	2012-2013
Average net price	\$24,632	\$24,927	\$26,088

Full-time beginning undergraduate students who were awarded Title IV aid by income.

AVERAGE NET PRICE BY INCOME	2010-2011	2011-2012	2012-2013
\$0 - \$30,000	\$11,939	\$15,104	\$12,176
\$30,001 - \$48,000	\$10,784	\$10,390	\$10,245
\$48,001 - \$75,000	\$14,688	\$18,531	\$16,583
\$75,001 - \$110,000	\$21,246	\$23,215	\$22,897
\$110,001 and more	\$39,354	\$37,475	\$37,946

- Average net price is generated by subtracting the average amount of federal, state/local government, or institutional grant or scholarship aid from the total cost of attendance. Total cost of attendance is the sum of published tuition and required fees, books and supplies, and the weighted average for room and board and other expenses.
- Beginning students are those who are entering postsecondary education for the first time.
- Title IV aid to students includes grant aid, work study aid, and loan aid. These include: Federal Pell Grant, Federal Supplemental Educational Opportunity Grant (FSEOG), Academic Competitiveness Grant (ACG), National Science and Mathematics Access to Retain Talent Grant (National SMART Grant), Teacher Education Assistance for College and Higher Education (TEACH) Grant, Federal Work-Study, Federal Perkins Loan, Subsidized Direct or FFEL Stafford Loan, and Unsubsidized Direct or FFEL Stafford Loan. For those Title IV recipients, net price is reported by income category and includes students who received federal aid even if none of that aid was provided in the form of grants. While Title IV status defines the cohort of student for which the data are reported, the definition of net price remains the same - total cost of attendance minus grant aid.

This is boring. I'm bored now.

OUR SERVICES

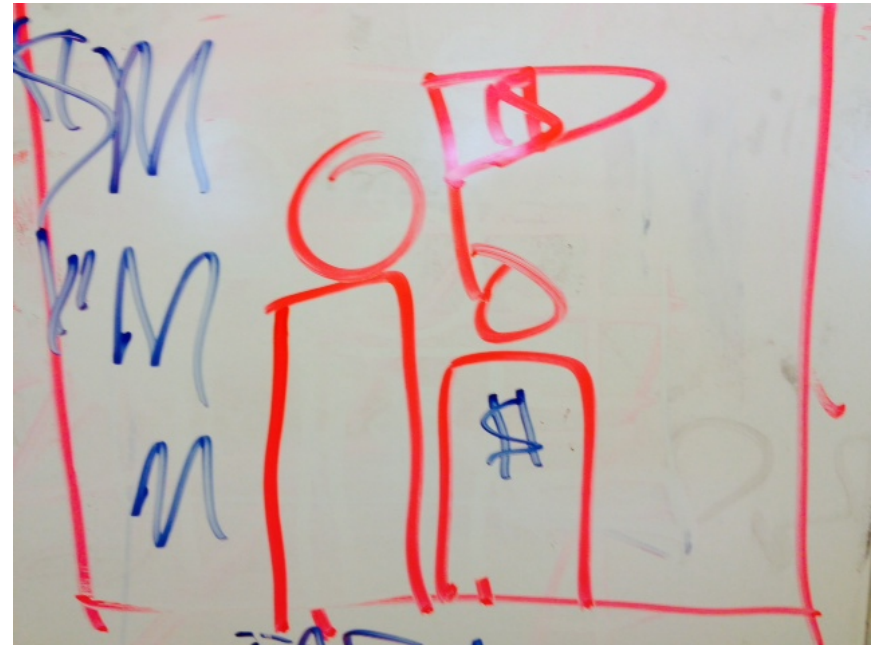

Repayment Plans

About Our Services:

Student Loan Consolidation Center is a document preparation business. In essence, we do all the heavy lifting for you when it comes to lowering your loan payments. Yes, you can do it on your own, but we guarantee that your paperwork is filed to the Department of Education's underwriting standards, ensuring that your program will be accepted immediately. We also make sure that you receive all of the benefits that you may be eligible for, such as forgiveness plans.

	A	B	C
1	Topic	Visual	Script
2	Headline	Stylized text?	Figuring out which Colleges are Most Affordable is Harder than it Looks
3	Deck		Data on what students pay after financial aid appears to present an apples-to-apples comparison, but they don't.
4	Story intro (gov't data released, here's this way of looking at students and tuition, etc.)	Government building, releasing paper (data) in a loop	At some colleges, the cost of attendance—tuition, fees, room and board, and other expenses—is now more than \$60,000.
5			But as such colleges are quick to point out, some students pay much less than the sticker price. The country's elite, wealthy colleges generally offer generous need-based financial aid.
6		**Can the income bands be spelled out in the graphic vs in the text?/bs	The federal government recently started to collect and publish the net prices students in different income bands pay after financial aid. This information, available in College Navigator, a government consumer information website, should allow prospective students to determine which colleges are most affordable for families like theirs.
7	Top-level presentation of the top 25 **it's really 50ish colleges/bs** or so universities represented in the new data	5x5 grid of university bldgs (maybe accompanied by small logos/seals?) **Instead of this, could we do a chart here, showing the top 25/50 colleges and their net price for the \$0-\$30k grouping? Might make a more effective visual for how much these vary drastically even at the most elite colleges. We could even have this stick from the "At some colleges, the cost of attendance is more than \$60K" line, but the graph could transition from showing total COA to net price by income. -JN	But colleges don't all interpret the instructions on how to report the net prices paid by students in different income bands the same way. Many wealthy colleges use two different systems to determine what families can pay. Some have been reporting to the government using the federal system, others using an institutional one.
8	Explain the federal finaid process (FAFSA)	Side-by-side**Do you think we can design this so that the graphic, not the text, says the name of each form and/or process?/bs**I like that idea. -JN	All colleges use the information on family income and assets that students report on the Free Application for Federal Student Aid to award government grants and loans. Some use the same information to award their own aid, too.
	Explain the institution finaid process (CSS PROFILE). What the difference is		Some colleges take a harder look at how much money a family has—looking at things like their income, but also at the cost of living in the state where the school is.

Not many teens have bank accounts of their own

A slightly below-average share of US 15-year-olds have bank accounts, according to the OECD figures presented in the left side of this chart. (Prepaid debit cards, shown on the right, are less common in across countries.) Giving students more real-world experience with banking might boost their financial literacy, which as shown above is relatively low.

Percentage of students holding a bank account and/or a prepaid debit card

Note: The data for Israel contained in this figure refer to a credit card instead of a prepaid debit card.
Countries and economies are ranked in descending order of the percentage of students holding a bank account and a prepaid debit card, respectively.

A screenshot of an ESPN Grantland article. The top navigation bar includes the ESPN logo and the word "GRANTLAND". Below the navigation bar is a large map of Alaska with a blue line indicating the Iditarod trail. The article text describes the Iditarod race, mentioning Anchorage, Fairbanks, and Juneau. It includes a small map of Alaska with the race route highlighted and a photograph of a snowy street scene with people and dogs. The text is as follows:

Prologue 1 2 3 4

ESPN GRANTLAND

Anchorage, Alaska's one real city. Fairbanks is a town, Juneau is an admin building with ideas. Anchorage is Tulsa, only poured into a little hollow in a celestially beautiful mountain range on the outer rim of the world.

When you're there, it truly feels like you're at the end of something. Like a last outpost. You're in a coffee shop, you ordered cappuccino, you can see white mountains from the window, and on the other side of the mountains is wilderness that hasn't changed since 1492.

That's an exaggeration, but not as much of one as you might think.

It's Saturday, March 2, the start of the Iditarod. Here's how this works: In the middle of the night, large trucks beep-reverse in and dump snow over an area of downtown. Race volunteers wearing little lanyard-clipped name badges spend a chunk of the night smoothing the snow down over the streets. Early the next morning, mushers and their dog handlers roll into the staging area in pickup trucks, the beds of which have been fitted with multi-compartmented dog carriers. The compartments on the carriers are arranged in a tic-tac-toe grid with little doors that open to the outside. Your reference here is a wall of PO boxes, only behind each door there's a sled dog lying in a snuggly bed of straw. Some of the dog carriers have

EXPLAINERS

Weapons and mass shootings

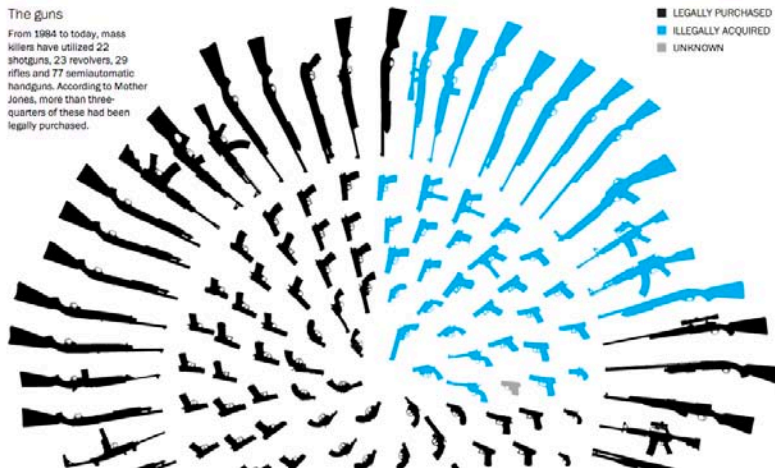

By Alberto Cuadra, Richard Johnson, Todd Lindeman, Ted Melnik and Kennedy Elliott, Published: May 31, 2014

America's latest mass shooting took place just over a week ago when a 22-year-old college student with a history of mental illness killed three people with a knife in his apartment before going on a shooting spree through Santa Barbara, Calif. By the time he took his own life, six people were dead and 13 wounded.

The guns he used, a pair of Sig Sauer P226 handguns and a Glock 34 handgun, were registered to him and had been purchased from federally licensed gun dealers. Data collected by Mother Jones looking back at the weapons used in the last 30 years of mass shootings in the U.S. show that legal weapons are the norm.

The guns

From 1984 to today, mass killers have utilized 22 shotguns, 23 revolvers, 29 rifles and 77 semiautomatic handguns. According to Mother Jones, more than three-quarters of these had been legally purchased.

BATTLE CRIES

By JENNIFER DANIEL JUNE 18, 2014

The world's best soccer players bring their own unique style to the game. So it is only fitting that the commentators react in kind — calling a goal with passion and personality. The jubilation that expands a commentator's call of "goal" to fill five, six, even 10 seconds of time seems universal, but there is regional variation. Different languages play a part, but so do regional sensibilities and the spirit of individual announcers. [RELATED ARTICLE](#)

The retired German Dortmund player Norbert Dickel takes his enthusiasm from the field to the commentator's box in this Dortmund-Málaga game.

Essam El Shawaly's tone is not just authoritative

during international tournaments on Al Jazeera Sports — his voice also narrates the Arab version of the FIFA 2012 video game.
